**HIV ANTIBODY TEST
 CONSENT FORM FOR INSURANCE APPLICANT**

INSURER: Assurity Life Insurance Company • P.O. Box 82533 • 1526 K Street • Lincoln, Nebraska 68501-2533

To determine your insurability, the Insurer named above has requested that you provide a blood sample, oral specimen or urine specimen for testing and analysis.

AIDS

Acquired Immunodeficiency Syndrome (*AIDS*) is a life-threatening disorder of the immune system, caused by a virus, HIV. The virus is transmitted by sexual contact with an infected person, from an infected mother to her newborn infant or by exposure to infected blood (*as in needle sharing during intravenous drug use*). Persons at high risk for contracting AIDS include males who have had sexual contact with another male, intravenous drug users, hemophiliacs and sexual contacts with any of these persons. AIDS does not typically develop until a person has been infected with HIV for several years. A person may remain free of symptoms for years after becoming infected. An infected person has a significant chance of developing AIDS over the next 10 years.

SCREENING

Prior to performing any blood test, the insurer may require a screening of one or more of your bodily fluids other than blood. The results of any such screening will not adversely affect your application.

THE HIV ANTIBODY TEST

Before you consent to testing, please read the following important information:

1. Purpose. This test is being run to determine whether you may have been infected with HIV. If you are infected, you are probably not insurable. This test is not a test for AIDS; AIDS can only be diagnosed by a medical evaluation.
2. Positive Test Results. If you test positive, you should seek medical follow-up with your personal physician because you may be infected with HIV.
3. Accuracy. An HIV test will be considered positive only after confirmation by a laboratory procedure that the state health officer has determined to be highly accurate. This Procedure normally entails two Enzyme-Linked Immunosorbent Serologic Assay (*ELISA*) tests confirmed by a Western Blot Test. Nonetheless, the HIV antibody test is not 100 percent accurate. Possible errors include:
 - a. False positives: The test gives a positive result, even though you are not infected. This happens only rarely and is more common in persons who have not engaged in high-risk behavior. Retesting should be done to help confirm the validity of a positive test.
 - b. False negatives: The test gives a negative result, even though you are infected with HIV. This happens most commonly in recently infected persons; it takes at least four to 12 weeks for a positive test result to develop after a person has been infected.
4. Possible Adverse Effects of Test. A positive test result may cause you significant anxiety. A positive test may result in uninsurability for life, health or disability insurance policies for which you may apply in the future. Although prohibited by law, discrimination in housing, employment or public accommodations may result if your test results were to become known to others. A negative result may create a false sense of security.
5. Disclosure of Results. A positive test result will be disclosed to you or the physician or county health department that you designate.

6. Confidentiality. Like all medical information, HIV test results are confidential. An insurer, insurance agent or insurance-support organization is required to maintain the confidentiality of HIV test results. However, certain disclosures of your test results may occur, including those authorized by consent forms that you may have signed as part of your overall application. Your test results may be provided to affiliates, reinsurers, employees and contractors of the insurer in relation to the underwriting of the insurance application. In addition, a report of a nonspecific blood disorder may be made to the Medical Information Bureau (MIB), Inc., a national insurance data bank.
7. Prevention. Persons who have a history of high-risk behavior should change these behaviors to prevent getting or giving AIDS, regardless of whether they are tested. Specific important changes in behavior include safe sex practices (including condom use for sexual contact with someone other than a long-term monogamous partner) and not sharing needles.
8. Information. Further information about HIV testing and AIDS can be obtained by calling the Oregon AIDS hotline within the Portland area at 223-AIDS and outside the Portland area at 1-800-777-AIDS.
